Due: June 30, 2024

Nurse Summary

Discussed and recommended today's care plan based on the history and medical records on file at the time of the visit.

Discharge

Emailed informational handouts at the conclusion of the visit.

**Vaccine Monitoring:** Zelda received a vaccination today and it is recommended that they are monitored carefully for the next few hours. Common normal responses to a vaccine include soreness at the injection site, sleepiness, and a decrease in appetite lasting approximately 24 hours. These are all common and are not a cause for concern. Rarely, pets may experience an allergic reaction to a vaccine. Vaccine reactions most commonly occur within 2 hours post-vaccine but may occur up to 24 hours post-vaccine. Signs of an allergic reaction may include facial swelling, hives, vomiting, diarrhea, severe pain, or severe lethargy. If you notice any of these signs, please call us immediately or have your pet re-evaluated.

### DECLINED Simparica Trio 44.1-88lbs (6 Pack)

Give one (1) chewable by mouth, every 30 days for the prevention of fleas, ticks, heartworm and intestinal parasites.

Quantity: 1   0 refills

## Other

### Bond Vet Examination and Consultation

Quantity: 1

## Plan

### Clinical Summary & Next Steps:

Discussed and recommended today's care plan based upon the Hx, PE, and medical records on file at the time of the visit.

### Diagnostics Offered:

4dx

Fecal OPG

**Treatments Offered:**

Lepto 1 year

Bordetella 1 year

Lyme #1 3-4 week

**Plan/Discussion:**

Discussed lifestyle vaccinations, and recommended Lyme

Recommended annual heartworm for flea and tick preventative

Recommended annual fecal test for intestinal parasites

Discussed administration of the flu vaccine at East 62nd location vs waiting until back in stock

**Discharge**

Emailed appointment information at the conclusion of the consult.

**ROUTINE PREVENTATIVE MEDICINE:**

There are numerous reasons to bring your pet in for her regular check-up. A check-up allows you and your veterinarian to discuss day-to-day aspects of your pet's health including diet, weight, behavior, parasite prevention, vaccines etc. However, a check-up can also include diagnostics like bloodwork and x-rays. As pets age, bloodwork is used to identify illness prior to the pet feeling sick or developing symptoms. Most veterinarians start recommending annual bloodwork at 3-4 years of age. As pets continue to age these diagnostics can become more extensive/frequent. It is recommended that most senior pets have a check-up and bloodwork every 6 months. Your veterinarian can help determine what is best for you and your pet.

**VACCINES:**

**Zelda received a vaccination today and it is recommended that she is monitored carefully for the next few hours.** Common normal responses to a vaccine include: soreness at the injection site, sleepiness, and a decrease in appetite lasting approximately 24 hours. These are all common and are not a cause for concern. Rarely, pets may experience an allergic reaction to a vaccine. Vaccine reactions most commonly occur within 2 hours post vaccine but may occur up to 24 hours post vaccine. Signs of an allergic reaction may include facial swelling, hives, vomiting, diarrhea, severe pain, or severe lethargy. If you notice any of these signs, please call us immediately or have your pet re-evaluated.

**FECAL DROP-OFF:**

Please bring a fresh stool sample at your earliest convenience. If you cannot drop off the fresh sample immediately, it can be stored in the refrigerator for up to 12 hours. We are

open daily from 10AM to 8PM. We will contact you with the labwork results once they become available and are reviewed.

#### PREVENTATIVES:

We recommend all dogs stay on preventatives year-round and have an annual 4dx (heartworm and tick-borne disease test) performed. Simparica Trio is our current recommendation, as this covers fleas, ticks, and heartworms in one chew once a month.

#### DENTAL CARE:

It is recommended that you brush your pet's teeth once a day, every day. This should be done with toothpaste and toothbrush that is specifically designed for pets. Please visit [VOHC.org](http://VOHC.org) to find a list of approved dental treats and products for good at-home dental care.

#### MONITORING:

Please monitor Zelda for lethargy, vomiting/diarrhea, inappetence, trouble walking/limping, difficulty urinating, difficulty breathing, or any other concerning changes. If you notice these signs please have her evaluated by a veterinarian immediately.

Thank you for bringing Zelda to Bond Vet and entrusting us with their care! Please don't hesitate to reach out with any questions or concerns. Our BondAid helpline is available 24/7 so feel free to contact us at 212-624-BOND. If you believe your pet is experiencing an emergency after we close at 8pm, please contact the nearest 24-hour emergency hospital.

#### EMERGENCY HOSPITALS:

The following serves as a list of veterinary emergency hospitals in the area. There are additional emergency locations in other boroughs as well as New Jersey, Connecticut, and Westchester. Please ask your veterinarian if you would like more information about other locations.

- Animal Medical Center - (212) 838-8100 - 510 East 62nd St (62nd and York Ave)
- BluePearl Pet Hospital - (212) 767-0099 - 410 West 55th St (between 8th and 9th)
- also has locations in Brooklyn and Queens
- VERG Brooklyn - (718) 522-9400 - 196th 4th Ave Brooklyn
- Veterinary Emergency Group (VEG) - multiple locations
- Best for urgent care, not for critically sick pets or surgery. Does not offer advanced imaging (CT/MRI)

**Follow-Up  
Information**

**Does this patient require a follow-up visit, diagnostics, and/or treatments?**

Yes

By Chealsea Campos on Jun 7, 2023
